

**A METHOD, SYSTEM, APPARATUS AND COMPUTER PROGRAM PRODUCT
FOR PORTABLE NETWORKING OF MULTI-USER APPLICATIONS**

ABSTRACT

5 A method, system, apparatus and computer program product for portable networking
of multi-user applications for users of hand-held terminals. More specifically, the present
invention utilizes a portable server with a mass memory for storing multi-user data used by
users of the hand-held terminals. The server has the capability of storing various types of
multi-user data and transmitting the data to a user of a terminal upon request. Using the
10 present invention, terminals have increased flexibility for receiving and utilizing multi-user
data without requiring large amounts of memory within the terminal itself.
